

NumTraits< double >

```
graph BT; A["Eigen::NumTraits< GQCP  
::EvaluableLinearCombination  
< Coefficient, FunctionType > >"] --> B["NumTraits< double >"]
```

The diagram illustrates an inheritance relationship. At the bottom is a gray-shaded box representing the base class: `Eigen::NumTraits< GQCP  
::EvaluableLinearCombination  
< Coefficient, FunctionType > >`. A blue arrow points upwards from this box to a white box at the top representing the derived class: `NumTraits< double >`. The white box has two empty rectangular sections below its header, while the gray box has two empty gray-shaded sections below its header.

Eigen::NumTraits< GQCP  
::EvaluableLinearCombination  
< Coefficient, FunctionType > >
