

NumTraits< double >

```
graph BT; A["Eigen::NumTraits< GQCP  
::EvaluableLinearCombination  
< Coefficient, FunctionType > >"] --> B["NumTraits< double >"]
```

The diagram illustrates an inheritance relationship. At the bottom is a gray-shaded box representing the base class: Eigen::NumTraits< GQCP ::EvaluableLinearCombination < Coefficient, FunctionType > >. A blue arrow points upwards from this box to a white box at the top representing the derived class: NumTraits< double >. Both boxes are divided into three horizontal sections.

Eigen::NumTraits< GQCP
::EvaluableLinearCombination
< Coefficient, FunctionType > >
